Abstracts

The global Breath Analyzers market size is expected to reach \$ 634 million by 2032, rising at a market growth of 11.5% CAGR during the forecast period (2026-2032).

Breath Molecular Diagnosis is a medical diagnosis based on the detection of the molecular composition of exhaled breath, also referred to as Breath Diagnosis or Breath Test. Medical diagnosis based on the detection of exhaled flow pressure is called Pulmonary Function Test, which is also a type of exhaled test or exhaled diagnosis. To avoid confusion, the issuer mainly uses the name 'exhaled molecular diagnosis', but sometimes for the sake of simplicity and consistency with the name of the outside world, the name 'exhaled diagnosis' or 'exhaled test' is also used. Exhaled molecular diagnosis is an emerging in vitro diagnostic (IVD) technology. Generally speaking, in vitro diagnosis requires the use of diagnostic reagents and equipment to analyze samples such as blood or urine. Sampling is performed first and then analysis. Cells, microorganisms and biochemical molecules can be analyzed. It is mainly used for the diagnosis of blood circulation or systemic diseases. Exhaled molecular diagnosis does not require diagnostic reagents, and sampling and analysis can be performed at the same time. It analyzes gas molecules produced by cell and microbial metabolism, which is particularly suitable for the diagnosis of respiratory and digestive related diseases. The role of exhaled breath molecular diagnosis is complementary to that of blood tests and imaging diagnosis. Like existing in vitro diagnostics, exhaled breath molecular diagnosis is also divided into two categories: professional laboratories and point-of-care diagnostics (POCT). Professional laboratories use laboratory analytical equipment such as gas chromatography, mass spectrometry and spectroscopy to perform exhaled breath analysis on patients' exhaled breath bags or gas collection tubes; due to the lack of exhaled breath sensor products, Europe and the United States currently provide analytical services for H₂, CH₄ and VOC (volatile organic compounds) exhaled breath

metabolomics through professional laboratories. Point-of-care diagnostics (POCT) use exhaled breath detection sensors, which integrate sampling and analysis. Patients only need a few seconds to sample their breath, and the instrument only needs tens of seconds to analyze the results. In summary, the issuer belongs to the POCT sub-industry in the emerging IVD field. Exhaled breath molecular diagnostic equipment is classified as a low-risk medical device by European and American drug regulatory authorities. The U.S. FDA believes that exhaled breath testing will affect medical diagnostic results. As a Class II medical device, it only tests and certifies the performance of exhaled breath testing. The EU regulates it as a special Class I medical device similar to a sphygmomanometer, which only requires self-testing or third-party laboratory testing according to EN standards. Therefore, exhaled breath molecular diagnostic equipment was first launched in Europe, and there are many of them now. China currently regulates exhaled breath molecular diagnostic equipment as Class II medical devices, and registration takes a long time. At present, most medical devices related to exhaled breath molecular diagnostic technology are in the market cultivation or introduction stage, requiring a large number of clinical trials, certification and registration.

POCT based on exhaled breath molecular diagnosis can provide detection items that blood test POCT lacks, such as detection of airway inflammation and gastrointestinal flora metabolic disorders. Moreover, POCT based on exhaled breath molecular diagnosis does not require blood drawing, and has the characteristics of non-invasive, instant, and biopsy. It can be used to make up for the shortcomings of in vitro diagnosis such as blood tests and imaging, avoid the risks of invasive in vivo diagnosis, and is more suitable for the use of common diseases and chronic diseases in hospitals, grassroots physical examinations, and family self-examination. In recent years, exhaled breath molecular diagnosis technology has been increasingly valued by domestic and foreign governments, research and development institutions, and related medical organizations. Various organizations and institutions have formulated relevant policies, development plans, and standard guidelines to jointly promote the rapid development of clinical technology for exhaled breath molecular diagnosis.

Exhaled breath molecular diagnosis or breath testing belongs to the emerging field of POCT technology. At present, the *Helicobacter pylori* breath test with the largest market size has a market history of less than 25 years, and the development of the inflammatory breath test product with the greatest market potential has only been 10 years, while breath testing technologies such as gastrointestinal flora metabolic disorders are still in the market cultivation stage. In addition, breath detection technologies such as breath NH₃, H₂S, VOC (volatile organic compounds), breath

metabolomics and olfactory artificial intelligence (electronic nose) are still in clinical trials or waiting for drug regulatory certification and approval.

In the past 30 years, with the gradual development of related technologies including breath detection abroad, the rapid growth of the domestic economy and the continuous development of the medical and health industry have provided a broad market space for the widespread application of this technology in China. At the same time, the development of domestic breath detection technology is almost synchronized with that of foreign countries, covering almost all areas of foreign breath detection, including the research of breath metabolomics and olfactory artificial intelligence, and many technologies are even ahead of foreign countries. It is one of the few emerging technology fields that may form a global leading breath detection in China.

With the continuous advancement of the construction of the PCCM system, the demand for breath analysis products in secondary and tertiary hospitals will further expand. Portable instrument products, handheld instrument products and other products for primary hospitals and home terminals are constantly being developed, and product application scenarios and usage needs will be further expanded.

With the development of science and technology and artificial intelligence, future breathalyzers will be more intelligent and automated, with functions such as automatic identification, data analysis and report generation, reducing human intervention and improving diagnostic accuracy and efficiency.

This report studies the global Breath Analyzers production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Breath Analyzers and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Breath Analyzers that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Breath Analyzers total production and demand, 2021-2032, (Units)

Global Breath Analyzers total production value, 2021-2032, (USD Million)

Global Breath Analyzers production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Units), (based on production site)

Global Breath Analyzers consumption by region & country, CAGR, 2021-2032 & (Units)

U.S. VS China: Breath Analyzers domestic production, consumption, key domestic manufacturers and share

Global Breath Analyzers production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)

Global Breath Analyzers production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Units)

Global Breath Analyzers production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Units)

This report profiles key players in the global Breath Analyzers market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include NIOX Group plc, Sunvou Medical Electronics Co, Headway, Richen Holding, Meridian Bioscience, CAPNIA, Inc., Kibion??, Otsuka Electronics, LEYI BIOLOGY, Shenzhen Breax, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Breath Analyzers market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (Units) and average price (US\$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

1 SUPPLY SUMMARY

- 1.1 Breath Analyzers Introduction
- 1.2 World Breath Analyzers Supply & Forecast
 - 1.2.1 World Breath Analyzers Production Value (2021 & 2025 & 2032)
 - 1.2.2 World Breath Analyzers Production (2021-2032)
 - 1.2.3 World Breath Analyzers Pricing Trends (2021-2032)
- 1.3 World Breath Analyzers Production by Region (Based on Production Site)
 - 1.3.1 World Breath Analyzers Production Value by Region (2021-2032)
 - 1.3.2 World Breath Analyzers Production by Region (2021-2032)
 - 1.3.3 World Breath Analyzers Average Price by Region (2021-2032)
 - 1.3.4 North America Breath Analyzers Production (2021-2032)
 - 1.3.5 Europe Breath Analyzers Production (2021-2032)
 - 1.3.6 China Breath Analyzers Production (2021-2032)
 - 1.3.7 Japan Breath Analyzers Production (2021-2032)
- 1.4 Market Drivers, Restraints and Trends
 - 1.4.1 Breath Analyzers Market Drivers
 - 1.4.2 Factors Affecting Demand
 - 1.4.3 Breath Analyzers Major Market Trends

2 DEMAND SUMMARY

- 2.1 World Breath Analyzers Demand (2021-2032)
- 2.2 World Breath Analyzers Consumption by Region
 - 2.2.1 World Breath Analyzers Consumption by Region (2021-2026)
 - 2.2.2 World Breath Analyzers Consumption Forecast by Region (2027-2032)
