## Abstracts

The global Breathable Ton Bag market size is expected to reach \$ 583 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global production of breathable ton bags reached 91 million units, with an estimated average selling price of US\$4.1 per bag. Breathable ton bags are a functional product among FIBC bulk bags, typically made of polypropylene (PP) flat filament woven fabric, mesh fabric, breathable strips, or ventilated fabric. They feature ventilation holes, mesh areas, ventilation strips, or mesh panels around the bag or in specific areas, allowing air to circulate between the inside and outside of the bag. This reduces heat and moisture buildup, minimizing mold, rot, condensation, and odors. They are primarily used for bulk materials such as agricultural products, timber, and biomass that require ventilation, drying, or quality maintenance. The upstream of the industry chain mainly includes PP resin, PP flat yarn, mesh fabric, UV stabilizers, masterbatches, food-grade additives, straps, sewing thread, labels, and packaging accessories; the midstream includes drawing, weaving, mesh fabric weaving, cutting, sewing, strap reinforcement, breathable area structural design, load testing, UV testing, and finished product inspection; the downstream includes agricultural product planting and storage, cold chain and ambient temperature logistics, firewood processing, horticulture, forestry, biomass fuel, agricultural wholesale, and export trade. The gross profit margin is approximately 20%-35%.
