According to our (Global Info Research) latest study, the global Bridge Crane End Carriage market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The crane end carriage plays an important role in the operation of the bridge crane, which is the key part of the load translation. The end beam consists of two parts: the wheel and the end girder. The end girder is composed of the upper cover plate, the web plate and the lower cover plate, and the connecting plate and angle steel are used for fastening. The internal mounting of the crane end carriage is generally strengthened and the stability of the end girder is improved. During the design of the bridge crane, the size of the end beam should be designed according to the span of the main beam, the wheelbase and the wheelbase of the trolley. When installing a overhead crane, the end beam is usually connected to the main beam, and then the end of the beam at both ends of the connection. As an important force component of the crane, the crane end carriage can gnaw the rail due to its manufacture, installation and improper operation. It needs to be maintained regularly during use.
