Abstracts

According to our (Global Info Research) latest study, the global Bridged Nucleic Acid (BNA) market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Bridged Nucleic Acid (BNA) is based on multi-functional synthetic RNA analogues that can be used in place of the first generation bridged nucleic acids known as Locked Nucleic Acids (LNA). BNA can be spiked with DNA or RNA in order to modify the structural formation of the nucleic acid helices. Also, when compared to Peptide Nucleic Acids (PNA), BNA allows for better base-pair stacking and a high stability, making BNA based oligonucleotides an ideal solution for the detection of small or highly similar DNA/RNA targets.
