Abstracts

The global Bright Kitchen and Stove Solution market size is expected to reach \$ 531 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

The Bright Kitchen and Stove Solution is a visual food safety monitoring system designed for food service establishments. By deploying high-definition video surveillance, AI-powered analytics, IoT sensors, and information display terminals in key food processing areas, it makes the entire kitchen operation process transparent, traceable, and visible in real-time to regulators, consumers, and management, thereby achieving ?visible food safety.?

The growth of the bright kitchen and stove solutions market is primarily driven by increasingly stringent food safety regulations, the digital transformation of foodservice operations, and rising consumer demand for transparency and oversight. As the scale of operations expands across school cafeterias, hospitals, government institutions, restaurant chains, central kitchens, and food delivery businesses, traditional regulatory models?which rely on on-site inspections and manual checks?struggle to provide comprehensive coverage across different times, regions, and locations. This has prompted government agencies and foodservice enterprises to accelerate the adoption of integrated solutions that combine video surveillance, AI-based behavior recognition, digital food safety logs, IoT sensing, remote inspections, and closed-loop rectification processes. Meanwhile, food safety incidents and kitchen hygiene issues have heightened public emphasis on operational transparency, ingredient traceability, and risk early-warning systems. Furthermore, the maturation of technologies such as artificial intelligence, edge computing, cloud video, 5G, and the IoT enables these solutions to automatically detect risks?including improper staff attire, smoking, rodent

infestations, improper waste disposal, standing water, and gas anomalies?thereby reducing manual oversight costs and enhancing the efficiency of issue detection and resolution, which continues to drive market demand.
