According to our (Global Info Research) latest study, the global Brightness Converters market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The brightness converter uses an optical pump source to convert the input light into higher brightness light through specific optical designs and materials. The core is the gain medium of light, which excites the particles in the gain medium to reach a high energy level. Higher brightness light is then produced through stimulated emission. Luminance converters are widely used in lasers, medical equipment, scientific research experiments and other fields.
