The global Brine Electro Chlorination System market size is expected to reach $ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Brine Electro Chlorination System is a device used to generate chlorine gas in the water treatment process. The system utilizes the principle of electrolysis of salt water to generate chlorine gas between the anode and cathode by electrolyzing sodium chloride (table salt) in the brine and dissolving it in water to generate sodium hypochlorite (hypochlorite). Hypochlorite is an effective disinfectant that can be used to treat drinking water, industrial wastewater, swimming pool water, etc. to destroy bacteria, viruses and other harmful microorganisms in the water.
