According to our (Global Info Research) latest study, the global Briquette market size was valued at US\$ 1180 million in 2024 and is forecast to a readjusted size of USD 1949 million by 2031 with a CAGR of 7.5% during review period.

Briquette is made of agricultural and forestry residues such as rice stalk, straw, cotton stalk, bamboo sawdust, wood flour, ramie stalk, peanut husk, etc. It is produced by pellet machines or briquetteing machines, after going through several processing procedures, such as crushing, drying, mixing, molding or compressing, etc. And the final products are pellets and briquettes, which are used as a replacement for coal, gasoline gas and other traditional fossil fuels. Compared to fossil fuels, biomass molding fuel produce low net total greenhouse gas emissions because the materials used are already a part of the carbon cycle.

According to the international ISO 17225 STANDARD, solid biofuels, fuel specifications and classes, a briquette is a “densified biofuel made with or without additives, having a cubic, prismatic or cylindrical shape, with a 25 mm diameter, produced from woody biomass compression or crushed herb.”

As the technology of Briquette is relatively mature and the downstream market, thus there are lots of enterprises in the Briquette market. The Briquette market competition will be still intense.
