According to our (Global Info Research) latest study, the global Broaching Machines market size was valued at USD 304.8 million in 2023 and is forecast to a readjusted size of USD 392.7 million by 2030 with a CAGR of 3.7% during review period.

A Broaching Machine is a machine tool whose cutting element is a broach.

Broaching machine, tool for finishing surfaces by drawing or pushing a cutter called a broach entirely over and past the surface. A broach has a series of cutting teeth arranged in a row or rows, graduated in height from the teeth that cut first to those that cut last. Since the total depth of cut is distributed over all the teeth, each tooth removes only a few thousandths of an inch. Broaching is particularly suitable for internal surfaces such as holes and internal gears, but it can also shape external gears and flat surfaces. Broaching machines are usually hydraulically operated.

The top five broaching machines producers in the world include Nachi-Fujikoshi, Ekin, Mitsubishi Heavy Industries, Forst Technologies, and Hoffmann R?umtechnik, with a combined market share of more than 28%. Europe is the world's leading producer of sealing tapes, with a market share of about 40%. In terms of type, the market share of vertical broaching machines exceeds 60%.
