According to our (Global Info Research) latest study, the global Broadband Polarizing Beam Splitter Prism market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The broadband polarizing beam splitter prism is an optical device that can split the incident light of any polarization state into two orthogonal polarization components and has a high extinction ratio and a wide operating wavelength range. It is made of two right-angle prisms bonded together. The inclined surface of one of the prisms is coated with multiple layers of interference film, allowing P-polarized light (polarized light parallel to the incident surface) to pass through, while S-polarized light (polarized light perpendicular to the incident surface) polarized light) reflection. The application fields of broadband polarizing beam splitter prisms include laser technology, optical communications, optical measurement, etc. They can be used to achieve functions such as beam splitting, combining, modulation, isolation, and polarization conversion of light.
