Thermally broken aluminum profiles, including broken bridge aluminum profiles, are designed with a thermal barrier or insulation layer within the aluminum frame. This thermal barrier is usually made of insulating materials such as polyamide or polyurethane. The purpose of a thermal break is to reduce heat transfer through the frame, preventing the loss of heat during the colder months and minimizing heat gain during hot weather.

The global broken bridge aluminum market refers to the market for broken bridge aluminum profiles used in the construction industry. This market is driven by the increasing demand for energy-efficient and sustainable building solutions worldwide. Here are some key points about the global broken bridge aluminum market:
