Abstracts

The global Brominated Butyl Rubber market size is expected to reach \$ 4115 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Brominated Butyl Rubber (BIRR) is an elastomeric isobutylene-isoprene copolymer containing reactive bromine. Because bromobutyl has the predominately saturated polyisobutylene backbone of butyl rubber, it has many of the attributes of the butyl polymer molecule. These attributes include physical strength, vibration dampening, low permeability, and resistance to aging and weathering from environmental exposure.

The market for Brominated Butyl Rubber is highly concentrated with limited players. Across the world Brominated Butyl Rubber the major players cover ExxonMobil, ARLANXEO, PJSC NizhneKamskneftkhim, JSR, etc. Production of IIR is North America. Europe, Japan and China are also major producing area of Brominated Butyl Rubber. Since the production of Brominated Butyl Rubber requires high technical experience, the competition would be moderate in the future.

The brominated butyl rubber (BIIR) market is experiencing steady growth, driven by increasing demand in the automotive and healthcare industries. In the automotive sector, BIIR is widely used for manufacturing tire inner liners due to its superior air retention, heat resistance, and durability, which contribute to enhanced fuel efficiency and longer tire life. With the rise of electric vehicles (EVs) and the need for high-performance tires, the demand for brominated butyl rubber is expected to rise. In healthcare, its applications in pharmaceutical stoppers and seals are also expanding due to its excellent chemical resistance and sterilization properties. Moreover, stringent regulations on emissions and sustainability are pushing manufacturers to develop more eco-friendly variants of BIIR, further shaping market trends.

This report studies the global Brominated Butyl Rubber production, demand, key manufacturers, and key regions.
