## Abstracts

According to our (Global Info Research) latest study, the global Brominated Pyridines market size was valued at US\$ 54.82 million in 2025 and is forecast to a readjusted size of US\$ 86.74 million by 2032 with a CAGR of 6.7% during review period.

Brominated pyridines are a family of nitrogen-containing heteroaromatic compounds derived from pyridine, in which one or more ring hydrogen atoms are replaced by bromine. The most common representatives are the three monobrominated isomers?2-bromopyridine, 3-bromopyridine and 4-bromopyridine?colorless liquids that behave as aryl bromides and are widely used as versatile building blocks in organic synthesis and as key intermediates in pharmaceuticals, agrochemicals and fine chemicals. Dibrominated pyridines such as 2,4-dibromopyridine further expand this family and are particularly valuable for stepwise cross-coupling and the construction of polyfunctional heteroaromatic frameworks.

Key upstream materials include pyridine and aminopyridines, bromine or hydrobromic acid, sulfuric/fuming sulfuric acid, phosphorus bromides, bases and typical organic solvents and catalysts. Downstream, brominated pyridines are widely used as pharmaceutical intermediates and active ingredients, agrochemical actives and key intermediates, fine chemicals and specialty chemicals, etc.

In 2025, global sales of brominated pyridines reached approximately 7,394 tons, with an average global market price of around US\$ 7,206/ton. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 45%.
