Several types of natural and synthetic food additives are available in the market. They are mainly used to preserve medicines, packaged and fresh foods, and other consumer products. Brominated vegetable oil (BVO) is also used as an additive in several products such as beverages, bakery products and others. The Food and Drug Administration (FDA) formerly considered brominated vegetable oil (BVO) as 'generally recognized as safe'. This decision was reversed after sometime by the agency. Nowadays, under certain situations and on a temporary basis pending more research, the FDA allows brominated vegetable oil to be used as a food additive.
