Bromine-containing Epoxy Polymer is a type of functional resin material in which bromine is introduced into the molecular structure of epoxy resin, combining the thermosetting characteristics of epoxy resins with flame-retardant properties. It is typically produced using tetrabromobisphenol A, brominated phenolic resins, or other bromine-containing aromatic compounds as the source of brominated structures, together with raw materials such as epichlorohydrin, bisphenol A, and phenolic resins

through condensation, epoxidation, or modification reactions. Compared with conventional bisphenol A-based epoxy resins, Bromine-containing Epoxy Polymer contains a relatively high proportion of bromine in its molecular structure, providing good flame retardancy and self-extinguishing properties while retaining the excellent adhesion, chemical resistance, electrical insulation, mechanical strength, dimensional stability, and heat resistance of epoxy resins. Depending on the base resin structure, bromine content, and mode of use, Bromine-containing Epoxy Polymer can be classified into bisphenol A-based brominated epoxy resins, brominated novolac epoxy resins, high-bromine epoxy resins, and other modified brominated epoxy resins, and can be further divided into reactive and additive types. Reactive products participate in crosslinking reactions during curing and become part of the thermosetting network, while additive products are primarily used as polymeric flame retardants in thermoplastic engineering plastics. Key performance indicators typically include bromine content, epoxy equivalent weight, softening point, viscosity, molecular weight, total chlorine content, hydrolyzable chlorine content, thermal decomposition temperature, and flame-retardant rating. Bromine-containing Epoxy Polymer is mainly used in copper-clad laminates, printed circuit boards, electronic laminates, semiconductor packaging materials, electrical insulation materials, and flame-retardant modification of engineering plastics such as PBT, PET, PA, and ABS, and is particularly suitable for electrical, electronic, and high-performance engineering material applications requiring high flame retardancy, electrical insulation, heat resistance, and long-term reliability.
