Abstracts

The global Bromine and Its Derivatives market size is expected to reach \$ 8455 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Bromine (Br₂) is a reddish brown liquid that gives off dark red, highly corrosive fumes having a sharp, penetrating odor. It is indispensable raw material for inorganic pharmaceuticals, photosensitive materials, dyes and medicine. It is also the base ingredient used in the manufacturing of hydrobromic acid (HBr) which is further utilized as a raw material for organic intermediates and medicines including lithium bromide and terephthalic acid. It is obtained from seawater, natural brines, or as the by-product brines of potash recovery. The Bromine Derivatives are the chemical which Chemical functional groups are replaced by the Bromine. In 2024, global Bromine and Its Derivatives production reached approximately 1194 K MT, with an average global market price of around US\$ 4350 per MT.

The bromine and its derivatives market is experiencing significant growth, primarily driven by the rising demand in applications such as flame retardants, oil and gas drilling, and water treatment. Bromine's effectiveness as a flame retardant in various industries, including electronics, automotive, and construction, is a key factor fueling its demand. As regulatory standards for fire safety become more stringent globally, the adoption of bromine-based flame retardants is increasing. Furthermore, the use of bromine derivatives like calcium bromide and zinc bromide in oil and gas drilling fluids enhances wellbore stability, boosting demand from the energy sector. These trends highlight the crucial role of bromine in ensuring safety and efficiency across multiple industries.

In addition to flame retardants and drilling fluids, the demand for bromine in water

treatment and pharmaceutical applications is also rising. Bromine compounds such as hydrogen bromide and sodium bromide are essential in water disinfection processes, especially in regions facing water scarcity and quality issues. The pharmaceutical industry relies on bromine derivatives for producing certain medications and intermediates, further supporting market growth. Geographically, Asia-Pacific, especially China and India, dominates the bromine market due to its vast manufacturing base and increasing industrial activities. However, environmental concerns related to bromine mining and production, as well as fluctuating raw material prices, may pose challenges, prompting the industry to explore sustainable and efficient production methods.
