Abstracts

The global Bromoethane market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Bromoethane is a chemical compound of the haloalkanes group. It is abbreviated by chemists as EtBr (which is also used as an abbreviation for ethidium bromide). This volatile compound has an ether-like odor. In organic synthesis, EtBr is the synthetic equivalent of the ethyl carbocation (Et⁺) synthon. In reality, such a cation is not actually formed. For example, carboxylates salts are converted to ethyl esters, carbanions to ethylated derivatives, thiourea into ethylisothiuronium salts, and amines into ethylamines. Molecular formula is C₂H₅Br.

This report studies the global Bromoethane production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Bromoethane, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
