## Abstracts

The global Bromopyridines market size is expected to reach \$ 105 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032). Bromopyridines are a family of nitrogen-containing heteroaromatic compounds derived from pyridine in which one or more ring hydrogen atoms are replaced by bromine. The most common members are the three monobromopyridine isomers?2-bromopyridine, 3-bromopyridine and 4-bromopyridine?which are aryl bromides used as versatile building blocks in organic synthesis and as key intermediates in pharmaceuticals, agrochemicals and fine chemicals.

Upstream, bromopyridines are industrially produced from pyridine or substituted pyridines through several bromination strategies. Key upstream materials include pyridine, 2-aminopyridine, N-methyl-2-pyridone, bromine or hydrobromic acid, phosphorus bromides, and standard solvents and catalysts. Downstream, bromopyridines are widely used as aryl bromide building blocks and key intermediates. In 2025, global sales of bromopyridines reached approximately 9,077 tons, with an average global market price of around US\$ 7,185/ton. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 45%.

This report studies the global Bromopyridines production, demand, key manufacturers, and key regions.
