According to our (Global Info Research) latest study, the global Bronchodilators market size was valued at USD 32040 million in 2023 and is forecast to a readjusted size of USD 42720 million by 2030 with a CAGR of 4.2% during review period.

Bronchodilators is the medication that is taken to improve breathing and are used for treating breathing related symptoms that are associated with allergic reaction. It is also used for expanding the airways and improving the breathing capacity function of patients with chronic obstructive pulmonary disease (COPD), bronchial asthma, emphysema, and other lung diseases. Bronchodilators function by relaxing the muscle surrounding the airways. These products are available over the counter or requires prescription. Basically there are available in three forms injectable, oral and inhaled. In oral forms they come in variety such as liquids, tablets and capsules, these oral forms are delivered in higher doses which is directly absorbed into the bloodstream and so they have relatively more side effects. Whereas inhaled once are directly deposited in the lungs causing less side effects. Bronchodilators are of basically-acting or long-acting beta2-agonists and anticholinergic agents or theophylline. They function so as to control asthma and COPD. Short acting bronchodilators function for fast relief of asthma symptoms and long acting bronchodilators function for control symptoms of asthma.

Increase in prevalence of pulmonary disorders, smoking, and junk food fuel the bronchodilators market growth. In addition, rise in disposable income, geriatric population, and increase in awareness of healthcare among population are anticipated to boost the market growth. However, side effects associated with bronchodilators and government regulations related to the safety & efficacy of the bronchodilators hinder the market. Ongoing R&D activities related to bronchodilators are anticipated to present

new opportunities for the market.
