According to our (Global Info Research) latest study, the global Brown Corundum market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Brown Corundum, also known as Brown Fused Alumina, is a dense and hard abrasive material derived from high-quality bauxite. It is produced by smelting bauxite in an electric arc furnace at high temperatures, resulting in the formation of fused aluminum oxide crystals. Brown Corundum exhibits a rich brown color due to the presence of iron oxide impurities. It possesses excellent hardness, high strength, and good wear resistance, making it a versatile abrasive material. Brown Corundum is widely used in grinding, surface preparation, and sandblasting applications to remove surface impurities, polish surfaces, or create textured finishes.

The industry trend of Brown Corundum is driven by the increasing demand for abrasives in sectors such as metal finishing, construction, and automotive manufacturing. Its properties, including high hardness, durability, and abrasive strength, make it essential for various applications. The trend involves the development of advanced manufacturing processes to produce high-purity brown corundum with controlled particle sizes and consistent quality. There is also a focus on enhancing environmental sustainability by adopting energy-efficient production methods and ensuring responsible sourcing of raw materials.
