According to our (Global Info Research) latest study, the global Brown Oxide Treatment Machine market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Brown oxide treatment machine is a kind of equipment used in PCB brown oxide treatment process. The brown oxide treatment is one of the methods for refining shiny copper surfaces and increases the adherence to resin. Brown oxidation uses acid and alkali to remove oxides, grease, residual dry film, fingerprints and other foreign matter on the surface of the PCB substrate. Through the chemical reaction between the liquid and the copper surface of the PCB substrate, the roughness of the copper surface is increased, which activates the copper surface and roughens the board surface. The purpose of brown oxidation is to enhance the bonding force between the inner core board and the prepreg.
