## Abstracts

According to our (Global Info Research) latest study, the global Brushless Motor Inner Winding Winding Machine market size was valued at US\$ 246 million in 2024 and is forecast to a readjusted size of USD 421 million by 2031 with a CAGR of 8.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The brushless motor inner winding machine is a device dedicated to the internal winding of the stator of the brushless DC motor. It is mainly used to accurately wind the enameled copper wire into the slot of the stator core. This winding method is called 'inner winding'. Compared with the outer winding type, the winding head moves inside the stator, which can adapt to the winding needs of small or micro motors with complex slot shapes and high winding density.
