## Abstracts

The global Brushless Power Tools market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

When it comes to power tools, how a tool is engineered can make a big difference in power and longevity. While brushless DC motors are relatively new to power tools, the technology has been around for decades. Brushless motors are more energy-efficient than brushed, often running on battery power for up to 50 percent longer. Since brushless motors don't contain brushes that lose energy to friction, they have a longer battery life than brushed tools.

This report studies the global Brushless Power Tools production, demand, key manufacturers, and key regions.
