## Abstracts

The global Bryonolic Acid market size is expected to reach \$ 22.89 million by 2032, rising at a market growth of 2.5% CAGR during the forecast period (2026-2032).

Bryonolic acid is a naturally occurring pentacyclic triterpenoid typically extracted (and sometimes semi-synthesized) from specific medicinal plants, with an industry chain that starts from upstream plant cultivation/collection and solvent extraction plus purification/standardization in the midstream, and extends to downstream applications as a bioactive ingredient in cosmetics/personal care (soothing, anti-inflammatory/anti-redness concepts), nutraceuticals/dietary supplements, and early-stage pharmaceutical or research uses as a lead compound/intermediate.

In 2025, global Bryonolic acid production reached approximately 3361 kg, with an average global market price of around US\$ 5549 per kg. The global single-line production capacity ranges from 300 to 500 kg per year. The industry's gross profit margin is approximately 20%-25%.
