Abstracts

The global BTC Mining Pool Services market size is expected to reach \$ 1584 million by 2032, rising at a market growth of 9.8% CAGR during the forecast period (2026-2032).

BTC Mining Pool Services refer to centralized platforms provided by professional operators that aggregate the computational power (hashrate) of numerous individual miners to collectively solve Bitcoin blocks. By leveraging the Stratum (and V2) protocols, these services transform the highly stochastic nature of solo mining into a stable and predictable income stream. Beyond task distribution and hashrate validation, mining pool services function as financial clearinghouses, responsible for calculating and distributing block subsidies and transaction fees to participants based on specific reward schemes such as FPPS or PPLNS.
