According to our (Global Info Research) latest study, the global Bubble Cleaning Machines market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The bubble cleaning machine is a machine used to clean vegetables and fruits. The principle is to use the water in the tank of the equipment box to form a cycle through a high-pressure water pump. There is a conveyor belt or chain plate driven by a conveying motor in the box. When passing through the box, the vortex fan will input air to the bottom of the box tank to form air bubbles. The bubbles drive the water flow to turn and thus drive the raw materials to roll. After cleaning, the conveying device will transport the raw materials out of the box tank.
