Abstracts

The global Bubble Cleaning Machines market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The bubble cleaning machine is a machine used to clean vegetables and fruits. The principle is to use the water in the tank of the equipment box to form a cycle through a high-pressure water pump. There is a conveyor belt or chain plate driven by a conveying motor in the box. When passing through the box, the vortex fan will input air to the bottom of the box tank to form air bubbles. The bubbles drive the water flow to turn and thus drive the raw materials to roll. After cleaning, the conveying device will transport the raw materials out of the box tank.
