Buchholz relay is a device that acts as a protective relay for oil-filled transformers. It monitors the oil flow as well as the gas accumulation and is actuated to prevent any damage to the transformer due to internal faults, ensuring efficient functioning of the transformer.

The growing need for flexible power systems and changing energy landscape as one of the primary factors that will trigger the growth of the buchholz relay market in the coming years. The demand for power has increased considerably across the world due to the growing population and rising global economy. For almost all the countries across the globe, energy security is the paramount national agenda. The international energy agency (IEA) estimates that the global generation of electricity from fossil fuels is projected to reach 61% by 2020 in terms of power generation. To sustain the pace of the economic growth, a considerable amount of power will be required. This power requirement can be attributed to the increasing population and rising developmental activities.
