## Abstracts

The global Buchu Oil market size is expected to reach \$ 890 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Global sales of buchu oil are projected to reach 325 tons in 2025, with an average price of US\$1884/kg.

Buchu is used to disinfect the urinary tract during infections of the bladder (cystitis), urethra (urethritis), prostate (prostatitis), or kidney (pyelonephritis). It is also used to treat sexually transmitted diseases. In manufacturing, the oil from buchu is used to give a fruit flavor (often black currant) to foods.

The raw material for buchu oil is the dried leaves of *Agathosma betulina* or *A. crenulata* (Rutaceae family), mainly produced in the Western Cape province of South Africa (Cape of Good Hope area). The leaves are harvested and dried from March to April each year, yielding approximately 1% oil through steam distillation. Due to the protection of wild resources, the purchase price of raw leaves is as high as 25-30 RMB/kg, accounting for 55-60% of the ex-factory cost. The processing involves 6-8 hours of distillation, oil-water separation, crude oil refining, filtration, and packaging. Energy consumption, labor, and testing account for 25-30% of the cost. Therefore, a 10% fluctuation in raw material prices can directly translate to approximately a 6% fluctuation in the essential oil price.

This report studies the global Buchu Oil production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Buchu Oil and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
