The global Buck Regulator Chip market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The buck regulator chip is a power management chip that can efficiently convert the input voltage into a lower output voltage to supply various loads in the circuit system. The advantage of the buck regulator chip is that it can improve the efficiency of power conversion, reduce heat generation and power consumption, and is suitable for various portable devices and industrial applications. The principle of the buck regulator chip is to use switching elements (such as transistors) and inductors to form a pulse width modulation (PWM) circuit, and adjust the size and stability of the output voltage by controlling the switching frequency and duty cycle of the switching elements.
