The cost is 235 usd per unit, the production is 30,000 k units. A Building Access Control Management System is an integrated security system used to control, monitor, and manage who can enter or exit specific areas within a building. It typically includes access controllers, card readers, biometric terminals, electric locks, software platforms, and visitor management functions. The system can use cards, passwords, fingerprints, face recognition, mobile credentials, or multiple authentication methods to improve building security, operational efficiency, and access record management. It is widely used in office buildings, residential communities, industrial parks, schools, hospitals, airports, and data centers.

Face recognition and multimodal authentication will become more common

Access control systems are moving beyond simple cards and PIN codes. More projects are adopting combinations of face, fingerprint, palm vein, QR code, and other authentication methods.

Cloud-based management is expanding

Traditional on-premise systems are gradually being replaced by cloud platforms, making it easier to manage permissions, visitors, and multiple sites remotely.

Mobile credentials are replacing physical cards

NFC, Bluetooth, QR code, and digital key technologies are becoming more widely used, especially in offices, hotels, apartments, and smart buildings.

Stronger integration with security systems

Access control systems are increasingly linked with CCTV, alarms, visitor management, parking systems, and elevator control to create a complete security platform.

More AI-based analysis functions

High-end systems are starting to offer stranger detection, tailgating alerts, blacklist matching, and abnormal behavior analysis, going far beyond simple door access.

Growing demand in high-security sectors

Data centers, hospitals, airports, government buildings, and industrial facilities are driving demand for advanced biometric and multi-factor access systems.

Contactless access remains important

Since the pandemic, more users prefer touch-free access methods such as facial recognition, automatic sensors, and mobile credentials.

Greater focus on privacy and compliance

In Europe and North America, privacy regulations and local data storage requirements are becoming more important, so vendors need to balance convenience with compliance.
