According to our (Global Info Research) latest study, the global Building Automation and Control System (BACS) market size was valued at USD 2634.1 million in 2023 and is forecast to a readjusted size of USD 3538.5 million by 2030 with a CAGR of 4.3% during review period.

Building automation and control systems (BACS) are collections of hardware and software that are networked together in order to monitor and control environmental systems in industrial and commercial buildings. These environmental systems include mechanical and electrical services such as lighting, heating and air conditioning. A BACS usually consists of a number of sensors and controllers, a centralized Web server and at least one user interface device. Controllers are basically small computers designed to control specific environmental devices or sub-networks of other controllers. The Web server monitors the controllers, and the user interface device, often a desktop or handheld computer, allows the person in control of the BACS to receive feedback about the system from the Web server.
