According to our (Global Info Research) latest study, the global Building Automation and Control Systems market size was valued at USD 66260 million in 2023 and is forecast to a readjusted size of USD 94160 million by 2030 with a CAGR of 5.1% during review period.

Building automation is the automatic centralized control of a building's heating, ventilation and air conditioning, lighting and other systems through a building management system or building automation system (BAS). The objectives of building automation are improved occupant comfort, efficient operation of building systems, reduction in energy consumption and operating costs, and improved life cycle of utilities.

Energy management needs and the growing emphasis on reducing utility costs, continue to drive the adoption of building automation systems. Majority of the large buildings today are equipped with these solutions in the developed parts of the world. Proactive measures taken by government organizations for the implementation of standards, such as ISO 50001 (energy-management-system standard) in the building sector, have the potential to stimulate the integration of building automation systems.

The Global Info Research report includes an overview of the development of the Building Automation and Control Systems industry chain, the market status of Commercial (Building Management Software, Environmental Control), Residential (Building Management Software, Environmental Control), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Building Automation and Control Systems.
