## Abstracts

According to our (Global Info Research) latest study, the global Building Automation Software market size was valued at USD 49770 million in 2023 and is forecast to a readjusted size of USD 85520 million by 2030 with a CAGR of 8.0% during review period.

Building automation is the automatic centralized control of a building's heating, ventilation and air conditioning, lighting and other systems through a building management system or building automation system (BAS). The objectives of building automation are improved occupant comfort, efficient operation of building systems, reduction in energy consumption and operating costs, and improved life cycle of utilities. Building automation is an example of a distributed control system – the computer networking of electronic devices designed to monitor and control the mechanical, security, fire and flood safety, lighting (especially emergency lighting), HVAC and humidity control and ventilation systems in a building.

One driver in the market is growing need of building automation for enhancing business outcomes. Building automation deployed in industrial, residential, and commercial buildings can substantially improve the outcomes of business operations in terms of efficiency, productivity, and cost. In the light of these benefits, building automation has become an integral aspect of businesses these days. One trend in the market is integration of IoT in building automation system. Traditional buildings are controlled manually, which entails high lead time and operational cost. Similarly, the existing intra-networking between devices suffers from huge disadvantages of limited connectivity due to complex wired or slow wireless technology.

The Global Info Research report includes an overview of the development of the Building Automation Software industry chain, the market status of Commercial Buildings (BMS Software, Standalone Building Automation Software), Industrial Buildings (BMS Software, Standalone Building Automation Software), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Building Automation Software.
