According to our (Global Info Research) latest study, the global Building Automation System market size was valued at USD 64480 million in 2023 and is forecast to a readjusted size of USD 93510 million by 2030 with a CAGR of 5.5% during review period.

Building automation is the automatic centralized control of a building's heating, ventilation and air conditioning, lighting and other systems through a building management system or building automation system (BAS). The objectives of building automation are improved occupant comfort, efficient operation of building systems, reduction in energy consumption and operating costs, and improved life cycle of utilities.

The wired communication technology held a larger size of the BAS market in 2017. In terms of application, commercial application held the largest size of the BAS market in 2017. The increased rate of implementation of BAS in large shopping complexes, office buildings, and public transport areas such as airports and railway stations is encouraging the growth of the BAS market for commercial application.
