The global Building Automation System Software market size is expected to reach \$ 456 million by 2032, rising at a market growth of 8.0% CAGR during the forecast period (2026-2032).

Building Automation System (BAS) Software is a digital platform used to manage and control building equipment and systems, including HVAC, lighting, security, energy management, fire safety, and communication subsystems. The software enables centralized monitoring, automated control, and optimization of building operations through data collection, device monitoring, and analysis. It improves energy efficiency, reduces operational costs, and enhances indoor environmental quality. BAS software typically works in conjunction with sensors, controllers, and hardware endpoints, providing visualization, alarm management, reporting, and remote control capabilities for facility operators.

BAS software is expected to evolve toward greater intelligence, cloud-based deployment, and platform integration. Artificial intelligence, big data, and IoT technologies will be widely integrated to enable predictive maintenance, energy optimization, and automated scheduling. Software will increasingly support open interfaces and standardized protocols for interoperability with diverse hardware systems, while providing mobile and remote access. With the development of smart buildings, green buildings, and smart cities, BAS software will extend from single-building management to campus- or city-scale energy management, driving higher operational efficiency and environmental sustainability.
