Abstracts

The global Building Damping Products market size is expected to reach \$ 564.5 million by 2029, rising at a market growth of 4.9% CAGR during the forecast period (2023-2029).

The key manufacturers of Building Damping Products include Yunnan QuakeSafe Seismic Isolation Technologies and Sumitomo Rubber Industries, SENQCIA, and Kawakin Holdings, etc.

The top four manufacturers have a combined market share of about 23%. The main market is the Asia-Pacific region, accounting for about 85% of the world market. Among them, China and Japan are the two major customers? accounting for more than 35% of the global market.

Building damping products are mainly divided into viscous damper, viscoelastic damper, tuned mass damper, shear damper and other types. Viscous damper and viscoelastic damper are the two main product segments, accounting for about 46% and 30% of the market, respectively.

At present, the products are mainly used in commercial buildings and residential areas, among which the sales of commercial buildings account for about 78% of the total sales.

Dampers are strategically placed in the building structure to control floor vibrations and building displacement, cater for occupancy comfort and mitigate against major seismic events. The energy generated by floor vibration and building displacement is absorbed by the dampers and dissipated through heat energy. The building occupants will

experience less floor vibration, smaller building displacements and overall a better occupancy comfort, even in an earthquake.
