Abstracts

A building energy management system (BEMS) is a sophisticated method to monitor and control the building's energy needs. Next to energy management, the system can control and monitor a large variety of other aspects of the building regardless of whether it is residential or commercial. Examples of these functions are heating, ventilation and air conditioning (HVAC), lighting or security measures. BEMS technology can be applied in both residential and commercial buildings.

Scope of the Report:

This report studies the Building Energy Management System (BEMS) market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Building Energy Management System (BEMS) market by product type and applications/end industries.

Asia Pacific building energy management systems market size is forecast to experience significant growth. The surging demand for these systems can be attributed to increasing popularity of green building technologies across the region. Latin America is predicted to witness high growth prospects owing to increasing awareness regarding energy conservation over the forecast period. Rising awareness regarding efficient use of energy at corporate and government levels is anticipated to propel building energy management systems market demand in commercial, residential as well as industrial sectors. The building sector is primarily responsible for global greenhouse gas emission as well as energy consumption. Surging energy prices and managing energy costs for commercial as well as residential buildings is expected to boost building energy management systems market size over the next few years. These sectors have been

adopting various appropriate technologies for controlling, conserving, and monitoring energy. High energy consuming areas in buildings are office equipment, HVAC systems, catering, pumps, etc. Energy consumption in building amenities that mainly includes the use of fossil fuels adds to air pollution, which is likely to have adverse impact on the environment and also likely affect residents' health.

The global Building Energy Management System (BEMS) market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
