Abstracts

Building information modeling (BIM) refers to a parameter based 3D model which can be used to generate design and plan out the entire lifecycle of a construction project. Numerous aspects associated with a construction project including architecture, planning, schedule and cost estimation, among others can be completely covered under a single 3D model with the use of BIM software. Thereby, a model created using a BIM software essentially works as a shared resource for information between various stakeholders in the construction activities. The BIM software has been widely adopted in order to avoid general issues during construction activities and reduce resource wastage. Numerous issues such as miscommunication, lack of coordination and delayed turnover between parties can be effectively addresses with the introduction of BIM software.

Scope of the Report:

This report studies the Building Information Modelling (BIM) market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Building Information Modelling (BIM) market by product type and applications/end industries. The major factors which are driving the growth of this market are rapidly increasing construction activities across the globe. Government regulatory bodies are also taking initiatives to raise the adoption of BIM in their respective countries. Adoption by small and medium enterprises is giving momentum to the BIM market. However, the high cost of BIM software and continuous software up gradation are hindering the market growth. It requires trained expertise in order to use it. Thus, low awareness about software handling can hamper the market growth. Nonetheless, technological advancement by
