According to our (Global Info Research) latest study, the global Building Informatization market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Building informatization refers to the process of digitalizing and integrating the various aspects of a building's design, construction, operation, and maintenance using advanced technologies such as Building Information Modeling (BIM), Internet of Things (IoT), cloud computing, and artificial intelligence (AI). It involves creating a digital twin of the building that captures all its relevant data and information in a single, unified platform. This includes data related to the building's geometry, structure, systems, equipment, materials, energy consumption, environmental conditions, occupancy, and more.

Building informatization aims to improve the efficiency, productivity, and sustainability of the building lifecycle by enabling better collaboration, communication, and decision-making among all stakeholders, including architects, engineers, contractors, facility managers, owners, and tenants. It helps to optimize building performance, reduce costs, enhance occupant comfort and safety, and minimize environmental impact.
