Abstracts

Building-integrated photovoltaic are materials that are applied in the parts of a building envelope such as skylights, roofs, and facades. Photovoltaic materials have a wide application in the building construction sector owing to its ability to provide supplementary electrical power. Application of building integrated photovoltaic skylights ensures an optimized electrical generation. It also adds multifunctional passive bioclimatic attributes of thermal internal comfort. Building-integrated photovoltaic skylights offer a bifunctional solution wherein it not only generates electricity, but also provides natural illumination.

Scope of the Report:

This report focuses on the Building-Integrated Photovoltaic Skylights in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The rising popularity of community solar gardens as one of the key trends behind the growth of the building-integrated photovoltaic skylights market. The community solar garden or CSG is shared by two or more subscribers that can be renters, homeowners, businesses, condo owners, schools, and government buildings. CSGs are gaining popularity as they require less investments to be made on energy and allow a group of renters, homeowners, condo dwellers, and businesses to share the benefits of a single solar installation. CSGs reduce the cost of availing solar energy and provides substantial reserve for use.

The worldwide market for Building-Integrated Photovoltaic Skylights is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023,
