## Abstracts

The global Building Maintenance Software market size is expected to reach \$ 1170 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

To address the problems of inefficient manual inspections, inconvenient paper-based record-keeping, difficulty in real-time monitoring of equipment status, frequent unexpected failures, and high maintenance costs in building facility operations and maintenance, building maintenance software has emerged. With the rapid development of smart buildings and Internet of Things (IoT) technologies in the early 21st century, this field has made significant progress. Currently, building maintenance software has evolved into a professional digital platform integrating workflow management, asset and equipment registers, preventive maintenance plans, IoT-based real-time monitoring, mobile inspection reporting, and data analysis reports. It encompasses computerized maintenance management, facility management, and property operations. It is widely used in commercial real estate, large public facilities, industrial parks, hospitals, campuses, and hotel management, enabling full lifecycle management of building assets, significantly improving operational efficiency, reducing energy consumption and failure rates, and optimizing user experience and asset value.

Building maintenance software is evolving from a 'tool' to an 'ecosystem,' continuously releasing value through technological integration and scenario deepening. The future requires overcoming technological bottlenecks, balancing efficiency and security, and leveraging policy benefits and market demand to drive the industry towards high-quality and sustainable development.
