Building Monitoring and Control Systems is an integrated system that centralizes control and intelligent management of various equipment and subsystems within a building. It leverages sensors, controllers, communication networks, and management platforms to monitor, control, and optimize HVAC, lighting, elevators, security, access control, fire safety, water and electrical systems, and energy management in real-time. BAS improves operational efficiency, energy utilization, safety, and occupant comfort. It is widely applied in office buildings, commercial complexes, hotels, hospitals, schools, data centers, and public facilities.

Building Monitoring and Control Systems are evolving toward greater intelligence, IoT integration, energy optimization, and digital management. As building scales and operational demands grow, BAS will increasingly leverage IoT, AI, big data analytics, cloud platforms, and edge computing to enable unified monitoring and control across systems and departments. Future systems will support automated adjustments, predictive maintenance, remote operation, and data visualization, delivering more efficient, energy-saving, safe, comfortable, and sustainable building management solutions, while advancing smart building and smart city development.
