The global Building Operation and Maintenance System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A building operation and maintenance system (BOMS) is a software platform that is designed to manage and optimize the operation and maintenance of a building's systems, equipment, and assets. It is a type of Computerized Maintenance Management System (CMMS) that is specifically tailored for the needs of building operators and facility managers.

A BOMS typically integrates data from various sources, such as building automation systems, energy management systems, security systems, and other building systems, to provide real-time monitoring, control, and analysis of building performance. It can also help with asset tracking, work order management, scheduling, inventory management, and reporting.

The main goal of a BOMS is to improve the efficiency and effectiveness of building operation and maintenance, reduce costs, extend the life of building systems and equipment, and ensure that building occupants have a safe, healthy, and comfortable environment. It can also help to meet regulatory compliance requirements and support sustainability initiatives by reducing energy consumption and carbon footprint.
