According to our (Global Info Research) latest study, the global Building Safety and Structural Audit market size was valued at US\$ 957 million in 2025 and is forecast to a readjusted size of US\$ 1314 million by 2032 with a CAGR of 4.5% during review period.

Building Safety and Structural Audit is a key technological system for ensuring the safety and reliability of buildings throughout their entire life cycle. Building safety refers to the comprehensive state of a building during its design, construction, use, and maintenance, protecting people's lives and property from harm, encompassing aspects such as disaster prevention, fire prevention, evacuation, and operational safety. Structural audit involves professional engineers independently and systematically reviewing and verifying the building structure's design schemes, calculations, and construction drawings. It assesses whether the building's load-bearing capacity, stability, and durability meet national standards and load requirements, aiming to identify and eliminate potential structural hazards. The combination of these two processes, through mandatory review and continuous monitoring, controls risks at the source, providing core assurance for building safety.

Globally, the development of Building Safety and Structural Audit exhibits significant regional differences. Developed countries and regions, such as North America, the European Union, and Japan, have established mature and stringent legal and regulatory systems, widely adopt performance-based design and risk-based advanced auditing methodologies, and mandate independent third-party audits and professional liability insurance systems. Emerging economies, represented by China, are in a phase of rapid improvement in their regulatory systems, continuous expansion of audit scope, and accelerated alignment of technologies with international standards. Meanwhile,

many developing countries, despite facing challenges such as insufficient regulatory enforcement capacity and a shortage of professional talent, are working to establish basic mandatory auditing frameworks under the impetus of international organizations. Overall, this presents a global picture of development moving from regulatory establishment to technological deepening, and from general coverage to refined management.
