## Abstracts

According to our (Global Info Research) latest study, the global Bump Welding Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Bump Welding Machine is pneumatic pressurized and bearing guided. The welding program is automatically controlled by the microcomputer control box. It is widely used in multi-point projection welding and spot welding of auto parts and other mechanical parts with precise welding point control and good electrode followability. There are many kinds of convex welding, besides plate convex welding, there are also convex welding of nuts and screws, cross-convex welding of wires, convex welding of pipes and t-shaped convex welding of plates, etc., which can be matched with different electrodes and touching tools according to the requirements of the user's welding workpiece. It is widely used in automobile manufacturing, tractor manufacturing, motorcycle manufacturing and other industrial sectors.
