Abstracts

The global Buoyancy Activated Cell Sorting (BACS) market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Buoyancy Activated Cell Sorting (BACS) is a cell separation technique that utilises glass microbubbles labeled with antibodies specific to the target cells. When mixed into the sample, the microbubbles bind to the target cells. Due to the augmented buoyancy force, the microbubbles float to the surface, separating the target cells.
