The global Buoyancy Compensator Device market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Divers wear a buoyancy compensator, which is a piece of diving equipment with an inflated bladder that allows them to maintain neutral buoyancy underwater and positive buoyancy on the surface as needed. The buoyancy is usually adjusted by adjusting the volume of gas in an inflatable bladder, which is filled with ambient pressure gas via a low-pressure hose from the regulator first stage, directly from a small cylinder dedicated to this purpose, or from the diver's mouth via the oral inflation valve.

This report studies the global Buoyancy Compensator Device production, demand, key manufacturers, and key regions.
