According to our (Global Info Research) latest study, the global Buried Pressure Regulating Box market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The buried pressure regulating box is a pressure regulating device used in underground gas transmission and distribution systems, specially designed for medium and low pressure regulation in urban gas transmission and distribution networks. It integrates gas pressure regulation, filtration, metering and other functions in a sealed box, buried underground, with only the maintenance and operation parts on the ground. This design saves ground space, is suitable for urban environments or places with limited space, and can reduce the impact on the surrounding environment and improve safety.
