Burns are a type of injury caused by exposure to heat. The heat can be thermal, electrical, chemical, or electromagnetic energy. The severity of burn depends upon the size and depth of the burn. Burns are defined as first, second, third or fourth degree burns, depending on how many layers of skin are burned. First degree burns are burns of the first layer of skin. Second degree burns are classified as superficial partial-thickness burns in which the first and second layers of the skin are burnt and deep partial-thickness burns injure deeper skin layers.
